Serhat Sahin

.NET Backend Engineer

I've been working on programming since 2020, exploring different languages and technologies along the way. Over time, I found my direction in backend engineering — specifically .NET and building scalable enterprise systems. Today, I specialize in designing multi-tenant platforms with ASP.NET Core, Clean Architecture, and Domain-Driven Design. I've shipped production systems handling real-time access control, CRM workflows, caching layers, and containerized deployments — writing lines of production C# so far. I work across the full backend stack: domain modeling, database design, API architecture, real-time communication with SignalR, Redis caching, Docker Swarm deployments, CI/CD pipelines, and observability with OpenTelemetry. Security and data protection (KVKK/GDPR) are always part of my process. I'm still learning new things and continuing to expand my knowledge — that part hasn't changed.

SKILLS

Core — .NET Backend
C#, .NET 10, ASP.NET Core, EF Core, Clean Architecture, DDD, CQRS, Repository + UoW, REST APIs, JWT, KVKK/GDPR

Data, Infra & DevOps
PostgreSQL, SQL Server, Redis, SignalR, Docker, Docker Swarm, GitHub Actions, CI/CD, OpenTelemetry, Serilog, xUnit

Also Experienced
Python, C/C++, Flutter/Dart, Blazor/WASM, Machine Learning, Arduino/Embedded

EDUCATION

OSTiM Technical University

Software Engineering, 2021 — 2025
GPA 3.00
Costech — Community Board Member

CERTIFICATES

IEEE Python Tutorial
Mar 2022 · DC-p5D1gVxY

English Certificate (B2)
Jan 2025 · verifiedportfolios.com

EXPERIENCE

Software Engineer Backend Developer

Dec 2025 — Present

TEXIT · Full-time · Hybrid · Ankara

- Developing and maintaining two core backend systems using ASP.NET Core (.NET 10) with Clean Architecture and Domain-Driven Design principles.
- **CRM** — A multi-tenant CRM platform for managing customers, projects, sales pipelines, billing, subscriptions, and document workflows.
- **Access Management** — A physical access control system for managing turnstiles, doors, and gates via QR/NFC/card-based authentication with real-time event processing.
- Designed and implemented domain services following a layered Query/Command service pattern, Repository + Unit of Work pattern, and Factory pattern with encryption, hashing, and PII protection (KVKK/GDPR compliance).
- Built multi-tenant features including tenant-scoped data isolation, licensing validation, rule-based access control, and comprehensive audit logging.
- Implemented caching strategies using a Decorator-based cache layer (Redis/In-Memory) with automatic cache invalidation on writes.
- Set up and maintained Docker Swarm deployments with CI/CD pipelines via GitHub Actions, including automated build, test, and rolling deployment workflows.

ASP.NET Core, C#, .NET 10, EF Core, PostgreSQL, SQL Server, Redis, SignalR, JWT, Docker Swarm, GitHub Actions, OpenTelemetry, Serilog, xUnit

Software Engineer Intern

Feb 2025 — Jun 2025

Utarit Bilisim · Full-time · On-site · Ankara

- Worked as a Test Engineer and .NET Developer Intern, contributing to the design, implementation, and execution of software testing processes while also developing backend features using .NET.
- Built SoliNova mobile app using Flutter/Dart. Wrote and maintained automated test cases, identifying bugs, and ensuring the reliability and performance of enterprise-level applications.

ASP.NET, C#, NUnit, Postman, SQL, Git, Test Documentation, Appium-Python, Swagger

Software Engineer Intern

Jan 2025 — Feb 2025

AVS Mühendislik · Hybrid · Ankara

- Using embedded system, we integrated circuit boards and made health devices. Example; Injector pump, Blood serum heater.

Arduino (Processing/Wiring), C++

Software Engineer Intern

Dec 2022 — Jul 2023

QUAVIS Aviation Solutions · Hybrid · Ankara

- Developed a client-side web application using the Blazor framework, with a focus on WebAssembly and .NET.
- Gained hands-on experience in developing interactive user interfaces and implementing application logic in a professional setting.

Blazor, ASP.NET, C#, OOP
